You can use technology in Jordanian classrooms. Here are some ideas: Many classrooms now use a whiteboard as a computer screen. As a consequence, teachers can show websites on the board in front of the class. Teachers can then use the Internet to show educational programmes, play educational games, music, recordings of languages, and so on. In some countries, tablet computers are available for students to use in class. Therefore, students can use the tablets to do tasks such as showing photographs, researching information, recording interviews and creating diagrams. Tablets are ideal for pair and group work.

Teachers can perhaps ask their students to start writing a blog (an online diary), either about their own lives or as if they were someone famous. They can also create a website for the classroom. Students can contribute to the website, so for example they can post work, photos and messages. Most young people communicate through social media, by which they send each other photos and messages via the Internet. Email exchanges are very useful in the classroom. Teachers can ask students to email what they have learnt to students of a similar age at another school. They could even email students in another country. As a result, students can then share information and help each other with tasks.

Another way of communicating with other schools is through talking to people over the computer. Most computers have cameras, so you can see the people you are talking to. In this way, students who are studying English in Jordan can see what students in England are doing in the classroom while they are speaking to them. You can also use this system to invite guest speakers to give talks over a computer. For example, scientists or teachers from another country could give a lesson to the class. If you had this type of lesson, the students would be very excited.

Students often use computers at home if they have them. Students can use social media on their computers to help them with their studies, including asking other students to check and compare their work, asking questions or sharing ideas. The teacher must be part of the group, too, to monitor what is happening.

When you are using a computer, think about the technology that is needed for **it** to work. People have been using types of computers for thousands of years. A metal machine was found on the seabed in Greece that was more than 2,000 years old. It is believed that **this** was the first ever computer. In the 1940s, technology had developed enough for inventors to make the first generation of modern computers. One such model was so large **it** needed a room that was 167 square meters to put **it** in. During that decade, scientists in England developed the first computer **program**. It took 25 minutes to complete one **calculation**. In 1958 CE, the **computer chip** was developed. computer game was produced in 1962 CE, followed two years later by the computer mouse. In 1971 CE, the **floppy disk** was invented, which meant that information could be shared between computers for the first time. The first **PC (personal computer)** was produced in 1974 CE, so people could buy computers to use at home. In 1983 CE, people could buy a laptop for the first time. Then, in 1990 CE, the British scientist Tim Berners – Lee developed the **World Wide Web**. However, it was not until 2007 CE that the first **smartphone** appeared. Today, most people use **their** mobile phones every day. What will happen in the future? You can already buy watches **which** can do the same as mobile phones. Scientists have also developed glasses that can do as much as this and more. Life in the future is going to see future changes in computer technology. It is likely that all aspects of everyday life will rely on a computer program, from how we travel to how our homes are heated.

Everyone knows that the Internet connects people, but now it does more than that – it connects objects, too. These days, computers often communicate with each other; for example, your TV automatically downloads your favourite TV show, or your ‘sat nav’ system tells you where you are. This is known as the ‘Internet of Things’, and there’s a lot more to come.

In just a few years’ time, experts say that billions of machines will be connected to each other and to the Internet. As a consequence, computers will increasingly run our lives for us . For example, your fridge will know when you need more milk and add it to your online shopping list; your windows will close if it is likely to rain; your watch will record your heart rate and email your doctor. Your sofa will tell you when you need to stand up and get some exercise!

Many people are excited about the ‘Internet of Things’. For them , a dream is coming true. They say that our lives will be easier and more comfortable. However, others are not so sure. They want to keep control of their own lives and their own things. In addition, they wonder what would happen if criminals managed to access their passwords and security settings. The dream could easily become a nightmare!

Question Number One

1. Quote the sentence which indicates that computers will run our lives?
2. According to the text, your future fridge can do two things. Write them down
3. Watches in the future can help people in two ways. write down these two ways.
4. Write down the sentences which indicates that a lot of people are satisfied with the " internet of things"
5. Criminals can commit two crimes by using the "internet of things. Write them down.
6. What do the underlined words (pronouns) refer to
7. Find a phrase in the last paragraph which means ‘controls available on computer programs which let you protect your computer from viruses’
8. Read the quotation. Do you agree with it? Why / Why not?“Technology is just a tool. In terms of getting the kids working together and motivating them, the teacher is the most important.” **Bill Gates (1955 CE)**
9. The writer states that it is recommended to use technology wisely. Explain this statement, suggesting three ways in which we can use it perfectly.
10. Technology is a way to keep our bodies fit. Think of this statement and , in two sentences ,write down your point of view.

Answers

1. As a consequence, computers will increasingly run our lives for us
2. Your fridge will know when you need more milk and add it to your online shopping list.
3. Your watch will record your heart rate and email your doctor.
4. Many people are excited about the 'Internet of Things' 5. Criminals managed to access their passwords and security settings
- . 6. it : the Internet / them : many people / their : others ' other people '
7. security settings
8. I agree with this quotation because Bill Gates refers to technology as a 'tool' in this quotation because he is emphasising that it is a useful and effective way of involving children. However, in terms of actually making sure children learn, or of ensuring children's social development, teachers cannot be replaced. They are the most important contributors to a person's education, but of course they can use technology to help!
9. We can use technology wisely in different ways . For example, we can depend more on our mental skills and raise awareness among people about how to use technology. Also, we can enhance the activities which depend on human not technology .
10. I think that technology is a way to keep our bodies fit. For example , smartphone apps can be used to monitor how much exercise we need to do and how many calories we burn . Also, interactive video games can be used to help us to keep fit. They are used indoors and provide a healthy, active alternative to watching television.
